ChefLak — Milestone 1 Report

Business Web Application

Executive Summary

ChefLak (شيف لك) is a web-based platform that connects Saudi families with verified private home chefs for special occasions. The platform addresses a clear gap in the Saudi market: no dedicated Arabic service exists to discover, compare, and book home chefs online. This report covers the business problem, proposed solution, target audience, and the functional prototype delivered.

Business Problem

Families across Saudi Arabia regularly need professional chefs for events birthdays, Eid gatherings, family meals (عزايم), and corporate functions. Today, the only way to find a trusted chef is through personal referrals. This approach is:

- **Unreliable** — no verified ratings, no proof of past work
- **Limited** — options depend entirely on one's social circle
- **Inefficient** — no standard pricing, no booking process, no contracts

There is currently no Arabic digital platform dedicated to private chef booking in Saudi Arabia. The market gap is significant given the country's large household spending on food and events.

Proposed Solution

ChefLak is a static web application that allows users to search for chefs by city and cuisine type, browse verified profiles with ratings and hourly pricing, view chef portfolios and rating, and complete a booking in three guided steps.

The platform acts as a trust bridge between families who need chefs and skilled home cooks who lack a marketing channel.

Target Audience

Segment	Profile
Saudi families	Hosting occasions: Eid, birthdays, large gatherings
Event organizers	Corporate lunches, weddings, catered functions
Home chefs (supply side)	Skilled cooks seeking clients and stable income
